

PRIVATE CAPITAL AND ACCELERATORS · CATEGORY 5

50 outreaches, 10 chats, 2 to 3 letters

The funnel as stated, with the definitions that make it countable and the current standing. The live copy is PIPELINE.md, which every run updates.

50 OUTREACHES	10 CONVERSATIONS	3 PILOTS OR LOIS
-------------------------	----------------------------	----------------------------

STAGE DEFINITIONS

So a number means one thing

Outreach sent	A written approach left the building, to a named office, person, or firm. Drafted is not sent. An application submitted to a program counts as an outreach as well as an application.
Reply received	Any human response that is not an autoresponder.
Conversation held	A call, a meeting, or a substantive written exchange. The target of ten.
Pilot or letter of intent	A written expression of intent to test, buy, host, fund, or collaborate. The target of two to three. ARG Petro is discussions and is not one of these until something is signed.

STANDING AS OF THIS RUN

August 25, 2026

Written	8 approaches across two outreach batches, plus 2 accelerator applications drafted here.
Sent	0. Five are staged as Gmail drafts and wait on Michael.
Replies	0.

Conversations	0.
Pilots or LOIs	0.
Gap to 50	42 approaches. At one per loop run this takes into 2027, which is the argument for batching rather than pacing.

WHAT THE FUNNEL IMPLIES ABOUT CADENCE

Fifty outreaches at one per run is a year of runs. The loop now writes them in batches instead: eight already exist, and the queue can absorb university tech transfer offices, corporate venture arms in chemicals and packaging, waste haulers, and bottlers without changing the format. The constraint is not writing them. The constraint is that none of the eight already written has been sent.
