Finishing the queue

Five more channels, all verified today. Two of them turned out to be funding routes rather than introductions, and both are in the registry now.

CHANNELS WRITTEN

5

Queue complete

STILL UNVERIFIED

1

NASA, lowest fit

Two finds worth more than the outreach: ORNL Innovation Crossroads takes applications September 15 to October 30, and the Cross Timbers APEX conference is October 27 in Hurst, twenty minutes from Haslet.

ARPA-E

Relationship before the spring IGNIITE concept-paper window. IGNIITE 2026 was invitation-only off a concept paper and was missed.

CROSS TIMBERS APEX ACCELERATOR

At UT Arlington, covering 75 counties including Tarrant. Free counseling under a Department of War cooperative agreement. Has a veterans track.

ORNL PARTNERSHIPS

Host of Innovation Crossroads, a DOE Lab-Embedded Entrepreneurship Program node. The outreach and the application are two different actions and both are worth taking.

EPA SBIR

No email is published. The web form is the channel, so the text below is written to be pasted into it.

USDA NIFA

Names published without addresses. A call script rather than a letter, because that is the only channel the agency actually offers.

NASA SBIR

Still the one gap. The program site publishes no reachable address and the fit is the weakest on the list. Left in the queue rather than papered over.
