

DOE ASPECT · DE-FOA-0003646 · TEAMING PARTNER LIST TPL-0000073

Nine steps, about twenty minutes

There is no deadline on a teaming list, which is exactly why it slips. The whole action fits in one sitting.

- 1 Open eere-exchange.energy.gov. This is the DOE Funding Opportunity Exchange, not the ARPA-E Exchange and not Grants.gov.
- 2 Register an account, or log in if one already exists. Use michael@plastibiofuel.com so DOE correspondence lands in the company inbox rather than a personal one.
- 3 In the left navigation pane, click **Teaming Partners**.
- 4 From the drop-down, select the list titled **"Teaming Partner List for DE-FOA-0003647: Accelerating Scale-up and Pre-piloting of Emerging Chemical Technologies (ASPECT)."** Select it by title. The title cites DE-FOA-0003647 and the body cites DE-FOA-0003646, and DOE has not reconciled the two.
- 5 Fill the nine fields from the Teaming Profile Responses document in this package. Paste the Background and Capabilities text whole rather than retyping it.
- 6 Read the publication notice before submitting. Every field becomes public on a list other applicants can read.
- 7 Submit the request.
- 8 Confirm the entry appears on the published list. If it has not appeared within five business days, email eere-exchangesupport@hq.doe.gov with the submission date.
- 9 Set a watch on the ASPECT page for the NOFO itself. Program questions go to ASPECT@doe.gov, Josh Messner. The funding loop rechecks this page every run.

What this does not do

Joining the list is not an application, does not reserve a place, and carries no weight in any future merit review. DOE says plainly that it does not endorse or evaluate the organizations that list themselves, and that a NOFO may never issue. The value is that teams form before a NOFO drops, and PlastiBioFuel is currently invisible to them.

One thing worth deciding before the NOFO

Whether PlastiBioFuel wants to be a prime or a subrecipient on a scale-up award. The profile says the company is prepared to be either, which is honest today. A pre-pilot program will ask for reactor capacity the company does not own, so the answer probably decides which partners are worth calling first.
