

STRATEGIC OUTREACH · BATCH 02 · QUEUE COMPLETE

Three more letters, ready to send

Same rules as batch 01. One small ask each, nothing about a pending proposal, and nothing claimed that the record does not carry.

LETTER 4 · ARPA-E

ARPA-E-CO@hq.doe.gov

SUBJECT

SDVOSB introduction ahead of the next IGNIITE cycle (UEI KQAWZ54RDUM8)

Dear ARPA-E, PlastiBioFuel LLC is a service-disabled veteran-owned small business in Haslet, Texas. We convert post-consumer PET into chemicals using an enzyme immobilized in a covalent organic framework, with a sponsored research agreement at the University of North Texas. I am writing early rather than late. IGNIITE 2026 closed to concept papers in May and moved to invitation, so we missed the cycle by not knowing it existed. I would rather be on the list before the next one opens. Two questions: 1. How do I make sure we hear about the next IGNIITE concept paper window, and about any ARPA-E program relevant to chemicals from waste feedstocks? 2. Is there a teaming partner list or an open RFI where a company at our stage is useful to you rather than the other way around? Where we stand, plainly: an independent final report from UNT confirms our enzyme breaks real post-consumer bottle PET down to terephthalic acid and identifies mass transfer as the limit on rate. Our reactor is a validated model, not hardware. We have produced no fuel. Respectfully, Michael David Ward Founder and Chief Executive Officer, PlastiBioFuel LLC UEI KQAWZ54RDUM8 | CAGE 175D6 | SDVOSB, certified and active in SAM.gov michael@plastibiofuel.com | 817-319-7383 | plastibiofuel.com

LETTER 5 · CROSS TIMBERS APEX
ACCELERATOR, UT ARLINGTON

CrossTimbers@uta.edu · 817-272-5978

SUBJECT

SDVOSB in Haslet seeking government contracting counseling and the October GPC

SEND THIS ONE FIRST

It is free, it is local, it is the only target on either list whose entire job is to help a company in your county win federal work, and the October 27 conference is a hard date. If only one letter goes out this week, send this one.

Dear Cross Timbers APEX Accelerator, PlastiBioFuel LLC is a service-disabled veteran-owned small business in Haslet, Texas, inside your service area. We are an R&D company converting post-consumer PET into chemicals, registered in SAM.gov with a UEI and CAGE code, and we are a first-time federal applicant with a DOE SBIR/STTR pitch going in on September 10. I would like to become a client. Specifically: 1. I would like to complete the Cross Timbers application and be assessed for the right readiness track. My read is that we sit between the JV Squad and Varsity descriptions: registered and operating, but pre-revenue and research stage rather than supply chain ready. 2. I would like to register for the 30th Annual Government Procurement Conference on October 27 at the Hurst Conference Center, and to know whether the matchmaking sessions are useful for a research company rather than a products or services vendor. 3. Your veterans track: is there anything specific to SDVOSB firms in the R&D space that I should be doing and am probably not? We are a small team and I would rather learn the process properly than guess at it. Respectfully, Michael David Ward Founder and Chief Executive Officer, PlastiBioFuel LLC UEI KQAWZ54RDUM8 | CAGE 175D6 | SDVOSB, certified and active in SAM.gov michael@plastibiofuel.com | 817-319-7383 | plastibiofuel.com

SUBJECT

SDVOSB introduction: enzymatic PET conversion, and Innovation Crossroads Cohort 2027

Dear ORNL Partnerships, PlastiBioFuel LLC is a service-disabled veteran-owned small business in Haslet, Texas, working on enzymatic conversion of post-consumer PET into chemicals. Our enzyme is immobilized in a covalent organic framework, and we hold a sponsored research agreement with Prof. Shengqian Ma at the University of North Texas. Two reasons to write. First, Innovation Crossroads. I intend to apply to Cohort 2027 when applications open on September 15, under Advanced Fuel and Feedstock technology. If there is an informational webinar scheduled, I would like to attend. Second, and separate from that application: our bottleneck is a transport problem. An independent UNT report attributes the gap between our immobilized turnover and the free-enzyme literature range to mass transfer down the framework channel. That is a question neutron science and characterization at ORNL are built to answer, and I would like to understand what collaborative mechanisms exist for a company our size, whether or not the fellowship works out. Our reactor is a validated model rather than hardware, and we have produced no fuel yet. I say that up front because it determines which of your mechanisms actually fits. Respectfully, Michael David Ward Founder and Chief Executive Officer, PlastiBioFuel LLC UEI KQAWZ54RDUM8 | CAGE 175D6 | SDVOSB, certified and active in SAM.gov michael@plastibiofuel.com | 817-319-7383 | plastibiofuel.com
